

What Makes our products Unique...

The first and foremost factor affecting reliability as well as cost of any product is its Raw Material. Almost all KICH products as well as their internal components are developed from Stainless Steel confirming to AISI 316 Grade Stainless Steel which is Highly corrosion resistant and resist the adverse effects of chemicals.

The following table compares chemical compositions of various steel grades and explains how AISI 316 Grade Stainless Steel is better than rest of the steel grades.

Chemical Composition In Percentage

Element %	202 Grade	304 Grade	316 Grade	Implications
Carbon	0.15	0.08	0.08	Increase in percentage decreases the corrosion resistance.
Silicon	1.00	1.00	1.00	-
Manganese	7.5 to 10.0	2.00	2.00	Affects the magnetic characteristic and hardness of Iron
Phosphorus	0.06	0.045	0.045	-
Sulphur	0.03	0.03	0.03	-
Chromium	17.0 to 19.0	18.0 to 20.0	16.0 to 18.0	Addition of 12% forms stainless steel from ordinary steel. Removes the corrosive effect of Carbon. Forms a passive film which prevents oxidation & consequent corrosion.
Molybdenum (MOLY)	NIL	NIL	2 to 3	Molybdenum increases the corrosion resistance. It has a superior tensile strength at high temperature as compared to 304 Grade steel. This element can resist major chemical reaction and thus being a very costly element.
Nickel	4 to 6	8.0 to 10.5	10.0 to 14.0	Nickel provides corrosion resistance, increases strength in both high & low temperature, increases toughness in low temperature and lowers the effects of work hardening. Thus higher percentage makes the steel superior in quality.

Effect of Chemical Testing done by our R & D department on various Grades of Stainless Steel Handles

Before Test

Effect on 202 Grade

Effect on 304 Grade

Effect on AISI 316 Grade

Key Features of AISI 316 Grade Stainless Steel

From the given table and chemical tests conducted by our R & D department, few unique characteristics of AISI 316 Grade Stainless Steel are simplified and summarized below:

- It can withstand the corrosion caused by atmospheric / environmental or major chemical reactions.
- It can resist high temperatures without going under any deformity which makes it highly recommended for fire safety doors in any building.
- It has remarkable creep strength and Rupture strength.
- It repels the Bacteria which makes it ideally suitable material for the venues such as Hospitals, Educational Institutes, Hotels and even at home and office where higher degree of hygiene is required
- Due to its natural finish, Product does not require regular cleaning or maintenance making it most suitable for public places.

Why KICH ?

"Quality Can not be Defined, It can only be Experienced"

- KICH products are made of Corrosion Resistant High Grade AISI 316 Stainless Steel which is better than rest of steel grades.
- KICH products are made out of 1.5mm metal thickness compared to 1.2 mm thickness offered by standard manufacturers.
- Long bush accommodates more threads increasing strength and life cycle of products.
- Equipped with Form Drill ensuring more strength and more affordability
- Specially developed Fixing Stud and Grubs ensure accurate fitting of handles and eliminates shaking of handles which may sometime even lead to breaking of glass doors.

Things Looking similar may be Quite Different Inside !

As KICH products are manufactured only from the Highest Quality raw material with utmost meticulousness, a little higher cost is unavoidable, however considering:

- High benefit/cost ratio
- Lifetime trouble free functioning with zero maintenance cost
- Longer Life cycle cost analysis
- Prompt Pre & After Sale services

KICH products assure peace of mind and the best reward for money spent by the customer.
